

Table 3: Local C2P-Cache hardware-overhead record. Numerical PPA results are intentionally blank: this branch contains no validated CACTI/Yosys/OpenROAD result generated from the local configuration.

Component	Basis / local design point	Result
Snapshot matrix capacity	5,120 bits $\times$ 64 logical columns	
Physical snapshot storage	64 banks; 4 copies/bank	
BF/tag-mask engines	128 engines; 1 tag-mask + 3 BF-hash positions	
Update transport	128 B/cycle	
Probe and fallback control	Request/response queues; target FIFO depth 32; timeout 32 cycles	
SRAM area	CACTI run not recorded for this configuration	
Synthesized logic	Yosys/OpenROAD run not recorded for this configuration	
Total area / power	No validated local PPA data	

Blank result cells are deliberate placeholders for a future reproducible PPA flow; no paper-derived values are copied into the local result column.
